

TRACTIONBACK®

Adhesive free backing

Milliken™

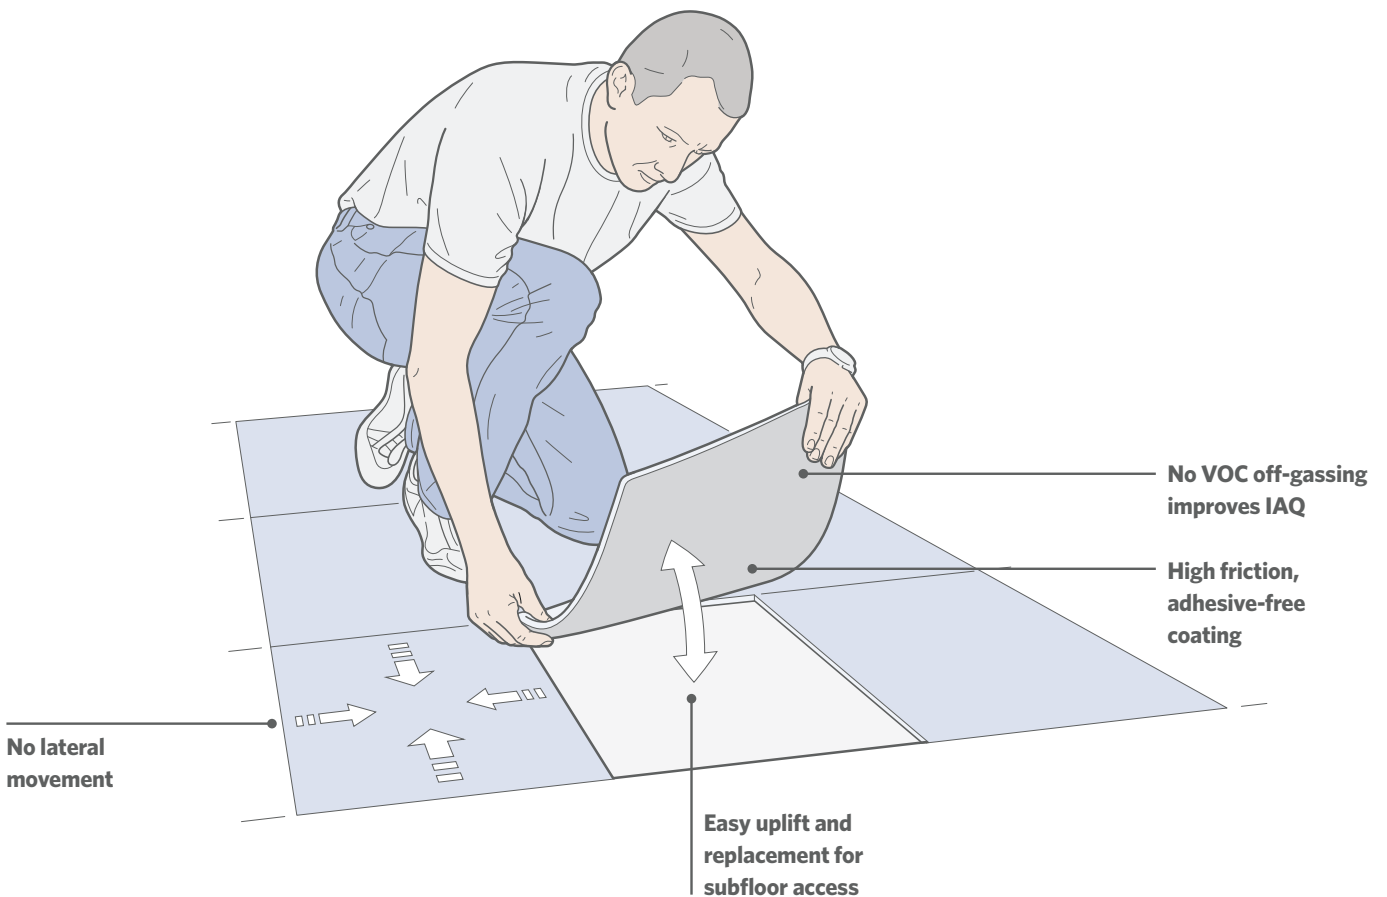

TractionBack[®] Adhesive Free Backing

Milliken has designed the most advanced, built-in system for installing modular carpet, eliminating the need for adhesives. TractionBack is a high friction coating, applied during manufacture, that keeps our PVC-free carpet tiles securely in place without additional floor preparation, primers, tapes, dots, or adhesives. Once installed, tiles with TractionBack remain stable on the floor and do not move laterally but can still be easily uplifted when access to the subfloor is required.

TractionBack® Adhesive Free Backing

TractionBack benefits:

- **Easy uplift and replacement** – for subfloor access
- **Improves indoor air quality** – eliminating VOC off-gassing typically associated with adhesives during installation
- **Reduces cost of labour and materials** – eliminating the need to pre-treat the floor with wet adhesives, saving time and materials and preventing damage to the subfloor. TractionBack also eliminates need for extra dots, adhesives, film or tape
- **Allows faster carpet installation** and therefore earlier space occupancy
